Internship consists of a series of tasks that walk you through the .NET web applications development with touching of some frontend. The goal is to get as much experience as possible during task implementation so the majority of internship is practice. After successful task passing mentees will be able to contact their mentors for any questions they have and this is how it's going to work.

The program stack is **.NET Core, C#, PostgreSQL, EF Core, ASP.NET Core, xUnit, Git** which is today's robust stack for backend part of web-projects of any complexity.

Welcome!
